Lotion Pumps

Lotion pumps are suitable for a wide range of products such as hand cream. The lower dose 1ml pumps may be suitable for sanitizer gels, a standard 2ml pump is suitable for liquid hand soap, while the 3-4.5 ml dosage pumps are more suited to dispensing emollient skincare or shampoos and conditioners.

Foamer Pumps

Foamer pumps work by feeding air into the fluid path before the product leaves the pump head. Foaming products are used for hand hygiene, tanning products and increasingly bath and shower products too. The small 30mm head is typically used with 50ml and 100ml sized bottles. The larger head will be used with a product which holds 150ml and above.

Cap Closures

Cap style closures provide a simple but effective means of decanting product from a bottle. They work well with hair, bath and shower products. However, consider bottle choice. Cap style closures mean that if a liquid is of a highly viscous nature then the user may need a more squeezable bottle such as one made from HDPE.

Treatment Pumps

Treatment pumps are suitable for face creams and hair serums, essentially any viscous liquid where only small dispensations are required at a time. They have a more luxurious and elegant feel in comparison with lotion pumps. However, they work in the same way and both pump the same kinds of product.

Atomiser Pumps

Atomiser pumps are suitable for dispensing room fragrance, perfumes and aftershave. These pumps are used on glass bottles. A crimping machine is used to permanently fix the metal collar of the pump onto the bottle neck. This is different to all of the other pumps we offer, which have screw threads.

Mini Trigger Pumps

Mini trigger pumps are suitable for dispensing a range of products including hair sprays and suncreams. They are a compact version of a standard trigger pump but are especially suited to products containing 50-250ml because of their small neck size.
